General Description

Samsung Secret

Description

LTA320AP33 is a color active matrix liquid crystal display (LCD) that uses amorphous silicon TFT(Thin Film Transistor) as switching components. This model is composed of a TFT LCD panel, a driver circuit and a back light unit.

The resolution of a 32.0" is 1366 x 768 and this model can display up to 16.7million colors with wide viewing angle of 178° or higher in all directions. This panel is intended to support applications to provide a excellent performance for Flat Panel Display such as Home-alone multimedia TFT-LCD TV and high definition TV

Features

- RoHS compliance (Pb-free)
- High contrast ratio & aperture ratio with wide color gamut
- SPVA(Super Patterned Vertical Align) mode
- Wide viewing angle (typ.178°)
- High speed response
- HD resolution (16:9)
- Low Power consumption
- Direct Type LED (Light Emitted Diode) BLU
- DE (Data Enable) mode
- 1ch LVDS (Low Voltage Differential Signaling) interface (1pixel/clock)

General Information

Vibration (non - operating)	V_{NOP}	-	1.5	G	(5)

Note (1) $T_a = 25 \pm 2$ °C

(2) Temperature and relative humidity range are shown in the figure below.

- $T_a \leq 39$ °C , Relative Humidity is max 90 %
- $T_a > 39$ °C , Relative Humidity is less than 90%
- No condensation

Fig. Temperature and Relative humidity range

(3) Although abnormal visual problems can be occurred in T_{SUR} range, the polarizer is not damaged in this range.

(4) 11ms, sine wave, one time for $\pm X$, $\pm Y$, $\pm Z$ axis

(5) 10-300 Hz, Sweep rate 10min, 30min for X,Y,Z axis

2. Optical Characteristics

Samsung Secret

The optical characteristics should be measured in a dark room or equivalent condition.

- Test Equipment Setup

The measurement should be executed in a stable, windless and dark room between 40min and 60min after lighting the back light at the given temperature for stabilization of the back light. This should be measured in the center of screen.

Environment condition : Ta = 25 ± 2 °C

- Definition of test point

Note (1) Definition of Contrast Ratio (C/R)

: Ratio of gray max (Gmax) & gray min (Gmin) at the center point ⑤ of the panel

$$C/R = \frac{G_{\max}}{G_{\min}}$$

Gmax : Luminance with all pixels white

Gmin : Luminance with all pixels black

Samsung Secret

Note (2) Definition of 9 points brightness uniformity (Test pattern : Full White)

$$B_{uni} = 100 * \frac{(B_{max} - B_{min})}{B_{max}}$$

B_{max} : Maximum brightness

B_{min} : Minimum brightness

Note (3) Definition of Response time : Average of T_R, T_F

5.4 Power ON/OFF Sequence

Samsung Secret

To prevent a latch-up or DC operation of the LCD Module, the power on/off sequence should be as the diagram below.

T1 : V_{DD} rising time from 10% to 90%

T2 : The time from V_{DD} to valid data at power ON.

T3 : The time from valid data off to V_{DD} off at power Off.

T4 : V_{DD} off time for Windows restart

T5 : The time from valid data to B/L enable at power ON.

T6 : The time from valid data off to B/L disable at power Off.

- The supply voltage of the external system for the module input should be the same as the definition of V_{DD}.
- Apply the LED voltage within the LCD operation range. When the back light turns on before the LCD operation or the LCD turns off before the back light turns off, the display may momentarily show abnormal screen.
- In case of V_{DD} = off level, please keep the level of input signals low or keep a high impedance.
- T4 should be measured after the module has been fully discharged between power off and on period.
- Interface signal should not be kept at high impedance when the power is on.
- In Case T5 is less than 1000msec and T6 is less than 100msec, garbage display can be seen. (It is not related to electrical function issue, just for recommendation to prevent garbage display)

LCD Packing	17ea / Box 34ea / Pallet (Packing-Pallet Box)	1. 4.5 Kg / LCD (34ea) : 153kg(Max) 2. 14.5Kg / Packing Box (1set) > Packing Box Material : Paper 3. 10 g/EA, 3 EA/Module, Cobalt-dichloride-free
Pallet	2Box / Pallet	1. Pallet weight = 4.8 kg > Pallet Material : HDPE
Packing Direction	Vertical	
Total Pallet Size	L x W x height	1150mm(L) x 850mm(W) x 1069mm(height)
Total Pallet Weight	187.82kg	Module (4.5*34) + Pallet (4.8kg) + Packing Set (14.5*2) + Desiccant (0.03*34) = 187.82kg

8. Marking & Others

A nameplate bearing followed by is affixed to a shipped product at the specified location on each product.

- (1) Part number : LTA320AP33
- (2) Revision: Three letters
- (3) Lot number : X X X X XXX XX X

(4) Nameplate Indication

(5) Packing box attach

(6) Others

1. After service part

LED bar can not be replaced because of the narrow bezel structure.

9. General Precautions

Samsung Secret

9.1 Handling

- (a) When the module is assembled, it should be attached to the system firmly using all mounting holes. Be careful not to twist and bend them.
- (b) Module should be disconnected from power before it is assembled or disassembled.
- (c) Refrain from strong mechanical shock and / or any force to the module.
In addition to damage, this may cause improper operation or damage to the module and LED back light.
- (d) Note that polarizers are very fragile and could be damage easily.
Do not press or scratch the surface harder than a HB pencil lead.
- (e) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, staining or discoloration may occur.
- (f) If the surface of the polarizer is dirty, clean it using absorbent cotton or soft cloth.
- (g) Desirable cleaners are water, IPA(Isopropyl Alcohol) or Hexane.
Do not use Ketone type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might do permanent damage to the polarizer due to chemical reaction.
- (h) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth . In case of contact with hands, legs or clothes, it must be washed away with soap thoroughly.
- (i) Protect the module from ESD (Electro-Static Discharge). Otherwise the ASIC IC or semiconductor would be damaged.
- (j) Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (k) Do not disassemble the module.
- (l) Do not disassemble shield case of LVDS board
- (m) Do not connect N.C pins. (Samsung internal use only)
- (n) Protection film for polarizer on the module should be slowly peeled off just before use so that the electrostatic charge can be minimized. Must put on antistatic glove while handling a module
- (o) Pins of Interface connector should not be touched directly with bare hands.

9.2 Package storage

We highly recommend to comply with the criteria in the table below.

ITEM	UNIT	Min.	Max.
Storage Temperature	(°C)	5	40
Storage Humidity	(%rH)	35	75
Storage Life	12 months		
Storage Condition	<ul style="list-style-type: none">- The storage room should provide good ventilation and temperature control.- Products should not be placed on the floor, but on the Pallet away from a wall.- Prevent products from direct sunlight, moisture nor water; Be cautious of a build up of condensation.- Avoid other hazardous environment while storing goods.- If products delivered or kept in conditions of over the storage period of 3months, the recommended temperature or humidity range, we recommend you leave them at a temperature of 20 °C and a humidity of 50% for 24 hours.		

9.3 Operation

- (a) Do not connect or disconnect the Module in the "Power On" condition.
- (b) Power supply should always be turned on/off by the "Power on/off sequence"
- (c) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference should be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (d) The cable between the back light connector and its Converter power supply should be connected directly with a minimized length. A longer cable between the back light and the Converter may cause lower luminance of lamp(LED) and may require higher startup voltage(Vs).

9.4 Operation Condition Guide

- (a) The LCD product should be operated under normal conditions.

Normal condition is defined as below;

- Temperature : $20 \pm 15^{\circ}\text{C}$
- Humidity : $55 \pm 20\%$
- Display pattern : continually changing pattern (not stationary)

- (b) If the product will be used in extreme conditions such as high temperature, humidity, display patterns or operation time etc., It is strongly recommended to contact SEC for application engineering advice. Otherwise, its reliability and function may not be guaranteed. Extreme conditions are commonly found at airports, transit stations, banks, stock market, and controlling systems.

9.5 Others

- (a) Ultra-violet ray filter is necessary for outdoor operation.
- (b) Avoid condensation of water. It may result in improper operation or disconnection of electrode.
- (c) Do not exceed the absolute maximum rating value. (supply voltage variation, variation in part contents and environmental temperature and so on)
Otherwise the module may be damaged.
- (d) If the module keeps displaying the same pattern for a long period of time, the image may be "sticked" to the screen.
To avoid image sticking, it is recommended to use a screen saver.
- (e) This Module has its circuitry PCB's on the rear side and should be handled carefully in order not to be stressed.
- (f) Please contact SEC in advance when you display the same pattern for a long time.
- (g) Be cautious for detergents or water not to be permeated into the gap between the module and the panel when placing the module upside down.
